## Introduction

Meals on Wheels America and the National Resource Center on Nutrition and Aging (NRCNA) contracted with Kauffman and Associates, Inc., (KAI) to conduct a technical assistance and training needs assessment evaluation. The focus of the evaluation is on the business drivers and training and technical assistance needs of senior nutrition programs. As part of this evaluation, KAI conducted an environmental scan to assess and summarize the training landscape and key business drivers of the nutrition and aging landscape. The environmental scan:

- identifies and summarizes key business drivers of nutrition and aging services identified in the literature;
- presents training opportunity areas for nutrition and aging service program providers;
- recognizes training gaps; and
- provides an inventory of current training opportunities.

Combined, these elements inform training strategy recommendations on where to focus training investments to fill gaps in knowledge and technical expertise.

## Methodology

To assess the key business drivers, training opportunities, and gaps, KAI reviewed documents provided by NRCNA and conducted a thorough review of gray and peer-reviewed, published literature. Peer reviewed, published literature was obtained through the database, EBSCOhost. Gray literature was obtained through targeted Google searches of government agency and nonprofit organizations' websites. NRCNA's repository of articles, white papers, and toolkits provided a useful source of gray literature. Additionally, to inform the scan and inventory of information on training, KAI reviewed data from evaluation forms from 5 NRCNA events (in-person and virtual), 11 2019 webinars, 9 2020 webinars, and feedback provided by NRCNA's social network (NRCNAengage) members on trainings they attend.

For the inventory of training opportunities, KAI researched the organizations and the trainings they offer, as listed by the NRCNAengage members in the training feedback form. This research led to searches of federal and state agencies, including the U.S. Department of Agriculture and ACL, and a review of NRNCA's training materials and those offered by other national organizations, such as the National Association of Nutrition and Aging Services Programs (NANASP).

## Background

The aging population in America is growing and includes increasingly significant diversity. In the United States, the number of adults aged 65 years or older is projected to nearly double from 52 million in 2018 to 95 million in 2060, increasing from 16% of the population to 23% (Population Reference Bureau, 2020). The aging population, once homogenous, is now increasingly diverse in racial ethnic backgrounds, disabilities, sexual orientations, and economic resources. For example, the population of older, non-Hispanic White adult population is projected to decrease from 77% to 55% between 2018 and 2060 (Population Reference Bureau, 2020). This boom in the aging population happens at a time when health

delivery and long-term services and supports (LTSS) are trending toward aging-in-place options to ensure that elder Americans are provided options for independent or assisted living in home- or community-based settings. The systems designed to support the aging population must adjust to meet the demands of this diverse and growing population and track and leverage the dynamic changes in public policy on aging in place, health finance reforms, and service delivery opportunities.

## Food Insecurity

Access to healthy food for older adults<sup>1</sup> is emerging as an increasingly important component of overall health and successful aging in place. However, food security is a serious concern. A 2018 report of household food security in the United States found that 11.1% (14.3 million) of all households, 7.5% of households with an older adult, and 8.9% of older adults living alone were food insecure at some point during 2018 (U.S. Department of Agriculture Economic Research Services, 2019).

## Impacts from COVID-19

The impact of the COVID-19 pandemic must be considered, as the need for senior nutrition assistance in this time of crisis has grown exponentially. Given the increases in unemployment and poverty associated with COVID-19, Feeding America estimates that the number of food-insecure individuals could increase from 9.9 million to 17.1 million (Feeding America, 2020). Feeding America also estimates that existing barriers to food access among older adults, including mobility and transportation challenges, will increase. Services have had to rapidly shift to procure and deliver food to more older adults who are home-bound due to states' shelter-in-place orders. The viability and growth of senior nutrition programs is more important than ever.

## Nutrition Services

Nutrition services are funded by the federal government through the Older Americans Act (OAA) Nutrition Program administered by the Administration for Community Living (ACL). The ACL's Administration on Aging (AoA) provides grants to states to help support nutrition services for older adults throughout the country.

Nutrition services authorized under Title III-C of the Older Americans Act (OAA) are designed to promote the general health and well-being of older individuals. The services are intended to:

- reduce hunger, food insecurity and malnutrition;
- promote socialization; and
- delay the onset of adverse health conditions.

These services include home-delivered meals and congregate meals served in group settings, such as senior centers. Through these services, approximately 5,000 providers serve 900,000 meals a day (ACL, 2020). In addition, the programs provide a range of other services like nutrition screening, assessment, education, and counseling. Nutrition services through these programs are designed to link to other supportive home- and community-based services (HCBS), such as homemaker and home-health aide, transportation, physical activity and chronic disease self-management, home repair and modification,

---

<sup>1</sup> For this document, *older adult* refers to a person age 65 and older.

and falls prevention programs and services. Congregate meal programs also promote social engagement and health education.

## Business Drivers for Senior Nutrition Programs

Programs are challenged with balancing regulatory requirements of federal programs with innovative business solutions to meet the nutrition needs of the aging U.S. population. A review of the literature found specific business drivers that impact nutrition programs, requiring them to modernize. Key drivers include the need to:

- diversify funding and find more cost-effective solutions to sustain programming;
- compete with private industry by improving food variety, flavor, and quality;
- develop new business models based on consumer input, community assessments, and strategic business plans.

## Sustainability

With the growing aging population, demand for nutrition programs has increased, but federal funding has declined. An analysis by the Congressional Research Services on OAA Nutrition Program data found total funding decreased over a 23-year period when adjusting for inflation, from \$25 per consumer to \$12 (Colello, 2014). In a 2015 article, Lloyd and Wellman described how OAA Nutrition Programs are funded only partially by federal expenditures. In 2014, 56% of congregate and 70% of home-delivered meal expenditures were funded from other public (state, city, and county) and private sources (participant contributions, fundraising, and grants).

A study of the Nutrition Services Programs' (NSP) meal costs conducted by Mathematica found that the cost of purchased nonlabor resources (food or payments to meal provision subcontractors or vendors) accounted for about half of the average cost of a meal, followed by paid labor, volunteer labor, and donated nonlabor resources (Ziegler, Redel, Rosenberg, and Carlson, 2015). The results of this study and those of the previous analysis of NSP meal costs suggest that the cost of food is increasing faster than inflation (Ponza et al., 1996). Several articles note the high cost of certain foods as a limiting factor in food and menu variety (Shanks, Haack, Tarabochia, Bates, and Chistenson, 2017; Juckett, 2017). Findings from the Mathematica study showed it costs more on average to provide a home-delivered meal than a congregate meal, and it costs less on average to produce meals at a central kitchen for large programs. Nutrition programs must be supplemented with funding from other sources, such as from other public sources, donations, and grants or by charging nominal fees for meals, to keep up with the increasing cost of food.

## Health Care Reform

The change in the health care landscape also affects how nutrition services are being delivered. Under the Patient Protection and Affordable Care Act of 2010, health care reform adopted the Triple Aim of Health Care framework: decreased cost, improved quality of care, and improved health outcomes (Institute for Health Care Improvements, 2020). As a result, new payment models based on the quality of health outcomes provide opportunities for interdisciplinary teams of health care providers to work together and for health systems to work in new ways.

Healthy eating is a cornerstone to reducing risks and preventing chronic disease and related injuries that threaten the overall health and independence of seniors, including chronic conditions such as, hypertension, heart disease, heart failure, diabetes, obesity, certain cancers, and osteoporosis. The Academy of Nutrition and Dietetics and the Society for Nutrition Education and Behavior (2019) describe how federal, state, and private resources can be leveraged to create a network of services and supports to improve the health and independence of seniors as they age. Opportunities exist for providers to partner to improve the array of services and supports aging Americans need to remain independent and healthy. The Academy of Nutrition and Dietetics and the Society for Nutrition Education and Behavior (2019) identified major recommendations for the network of community food and nutrition programs across the federal, state, tribal, and local government sectors, including: (1) improve evidence-based outcomes, (2) improve target programming, (3) communicate and coordinate across partners, and (4) advocate for increased funding (Academy of Nutrition and Dietetics, 2019).

Akobundu and Netterville (2015) describe how the Aging Network is well positioned to meet the Triple Aim. The Aging Network is the nation's largest network of state units on aging, Area Agencies on Aging, tribal organizations, and HCBS. Their purpose is to help older adults maintain their independence and remain in their own homes and communities as long as possible. Akobundu and Netterville (2015) suggest the Aging Network's provision of person-centered, comprehensive, home- and community-based long-term care can work effectively with the health care system to meet the Triple Aim.

## Competition

Access and availability of food has changed over the years, creating a more competitive environment in which nutrition programs must compete. Some studies found that people were not aware of the nutrition programs in their communities and that more visibility via advertising was needed (NRCNA, 2020a). In addition to poor visibility, these programs must compete with soup and salad bars in supermarkets, take-out and fast-food options, and home-delivered food kits, to name a few. Commercial vendors produce meals that meet OAA requirements and compete with senior nutrition programs on price and quality (Lloyd, 2019; Netterville, 2019).

Nutrition programs face negative perceptions that affect their number of participants. A common stereotype is that these programs are for the old and poor, so the Baby Boomer population does not want to be associated with them. For example, focus group participants in a study in Montana identified senior center meals for the old and poor (Shanks, Haack, Tarabochia, Bates, and Chistenson, 2017). Potential participants also described congregate meals sites as "sterile" and "a place with bad food and where old people go" (Hoerr, Francis, Margrett, Peterson, and Franke, 2016, pg. 116). As a result, congregate meal programs (CMPs) have experienced declining participation, despite an increase in the aging population.

Consumers want more menu choices, a congregate meal experience that is similar to a restaurant, and more flexibility in their eating schedules. Food quality is also important in attracting nutrition program participants. A diverse aging population requires diverse food options that reflect specialized diets, such as vegetarian, vegan, and culturally appropriate foods.

## Social Enterprise

To remain competitive, the literature calls for nutrition programs to develop more innovative business models (Lloyd, 2019; Netterville, 2019). A social enterprise (or entrepreneurship) is defined as an organization that applies commercial strategies to maximize improvements in its financial, social, and environmental well-being. State Area Agencies on Aging (AAA) are engaging in several social entrepreneurship models. These models range from a food truck pilot in Wisconsin, working with a caterer to improve food quality in Florida, coffee shops and cafes in Wyoming, and chef-led cooking demonstrations in Iowa (NRCNA, 2020a).

Netterville (2019) describes innovative nutrition business models that diversify funding while meeting the needs of their consumers. For example, a commercial food operation where the senior nutrition program produces bulk food products, such as salsa, and distributes them to grocery stores and restaurants. Meals on Wheels in Portland, OR, has a neighborhood restaurant where multi-generational diners can eat and socialize together. LifeCare Alliance in Columbus, OH, provides catering services for events, such as weddings and parties. Another approach is to promote a CMP program as “an avenue for education (e.g., lunch and learns)” (Hoerr et al., 2016, pg. 121).

Future research should focus on CMP marketing efforts, including renaming the program, continuing education programming, and adding intergenerational holistic wellness programming (Hoerr et al., 2016, pg. 121). New business models require highly developed business acumen among nutrition program leaders. Netterville (2019) describes a list of six strategies for implementing successful business models:

- develop a strategic business plan,
- identify assets,
- identify service packages for products,
- develop marketing and sales strategies,
- improve communication and negotiation skills, and
- know the program’s capacity to implement a continuous quality improvement program.

## Training Opportunities

Training opportunities relevant to the aging and nutrition services emerged from the literature, current resources available from NRCNA and other aging and nutrition service providers, and evaluations of NRCNA’s previous webinars and events. The training opportunity areas presented in this scan are:

- partnerships and integration between community-based organizations and health care entities,
- social determinants of health,
- innovations for sustainability in billing and payments,
- innovations in the delivery of congregate and home-delivered meals, and
- malnutrition among older adults.

## Partnerships and Integration between Community-Based Organizations and Health Care Entities

Improving the business acumen of community-based aging and disability organizations (CBOs) through partnerships and integration with health care entities has been an area of increased focus and training for several years. The ACL launched the Business Acumen Initiative in 2012 to provide grant funding and convene learning collaboratives, host webinars, and provide other resources on topics through 2016. In 2016, ACL partnered with The John A. Hartford Foundation, SCAN Foundation, and the National Association of Area Agencies on Aging (n4a) to establish the Aging and Disability Business Institute. The institute provides training opportunities and materials focused on partnerships with health care entities, including a readiness assessment tool, webinars, and articles available on their website.

Partnerships with health care entities is also an area of focus for NRCNA trainings, which NRCNA webinar and event attendees have responded to positively. Attendees of three NRCNA in-person events (2018 and 2019 pre-conference and the 2019 convenings) noted that partnerships and collaborations were important concepts learned and “hot topics” for future learning events. For example, based on data provided by NRCNA from their 2018 pre-conference, 26 attendees (out of 107 responses) listed partnerships or collaborations with health care entities as one of the top three concepts they learned from the pre-conference. Given the growing interest in partnerships as a way to achieve the Triple Aim, NRCNA might continue to focus on and develop training materials for this area.

## Social Determinants of Health

The literature highlights the importance of social determinants of health (SDOH) and suggests a growing interest in programs and policies that address SDOH for older adults (McCarron et al., 2020; Lloyd and Curley, 2019). SDOH has been a hot topic in public health and health care for several years and is an area of focus for trainings for senior nutrition program providers. Additionally, as the impacts of COVID-19 intensify, so will health disparities and the importance of addressing the SDOH (Szabo and Recht, 2020). Several organizations, including NRCNA and the NANASP, have current training materials, including webinars and white papers, on the topic. For example, a search of “social determinants of health” of NRCNA’s website resources yields approximately 16 items (including articles, toolkits, and webinar slides) on the topic.

## Innovations for Sustainability in Billing and Payments

Based on NRCNA webinar attendance, innovations in billing and payment for senior nutrition programs is an area of interest. A 2020 NRCNA webinar with high attendance (521) covered the topic. The webinar explained how Medicare reimbursement for medical nutrition therapy for older adults is a sustainable funding source for senior nutrition programs with registered dietitians. Webinar attendees indicated that they were interested in learning more about this topic and billing and payment issues. Of the 61 webinar attendees who responded to a question on topics for future webinars, 31 cited medical nutrition therapy, reimbursement, or billing.

## Innovations in the Delivery of Congregate and Home-delivered Meals

NRCNA and the NANASP appear to be leading the charge in trainings and resources related to improving the congregate meals program (NRCNA, 2020b). Despite the health benefits for older adults, the congregate meals program has seen a decline in enrollment and negative perception by potential participants (Hoerr et al, 2016). NRCNA and NANASP have developed robust resources to improve and rebrand the program. The two organizations have also hosted a 2019 convening and developed two white papers and three briefs on the topic (NRCNA, 2020b).

Home-delivered meals is also an area of potential immense growth and opportunity for innovation and training. It has been an area of focus for recent NRCNA webinars and other resources materials, including toolkits. Home-delivered meals is a topic of major focus for Meals on Wheels America, and one that they have presented on at their national and state conferences. With the major impact of COVID-19 on older adults, the need for home-delivered meals is likely to increase greatly (Graham, 2020). It is also an area where programs are already displaying incredible innovation. For example, Mathematica highlighted creative avenues being used to deliver meals to older adults in Nevada, like drive-through distribution sites and the use of city buses to deliver meals (Mabli, 2020).

## Malnutrition among Older Adults

Adult malnutrition is a topic with significant resources and training opportunities. Several national organizations host trainings, resources, and awareness events on malnutrition. Abbott Nutrition Health Institute offers six free, online trainings for dietitians, case managers, and nurses on adult malnutrition. Additionally, the National Council on Aging hosts a Community Malnutrition Resource Hub on their website. The American Society for Parenteral and Enteral Nutrition hosts the annual Malnutrition Awareness Week in October. While the effort focuses on malnutrition broadly, it includes materials such as infographics and patient stories focused on older adults. The volume of trainings is backed by the literature, which identifies malnutrition as a serious problem that impacts up to 50% of older adults and contributes to over \$50 billion in annual costs (Snider et al., 2014; Kaiser et al., 2010; Izawa, 2006).

## Gaps in Training

The following gaps in training emerged from the literature and the inventory of programs:

- meeting the needs of an increasingly diverse patient population,
- tailoring training for specific state and regional needs, and
- providing training on needs assessments.

## Meeting the Needs of an Increasingly Diverse Patient Population

The literature suggests a need for trainings among health professionals and community-based providers to better serve the increasing racially and ethnically diverse aging population in the United States (McCarron et al., 2020; Lloyd and Curley, 2019). In a 2011 paper summarizing the results from 15 key informant interviews with community-based service providers, providers described concerns about deficient culturally appropriate approaches to working with older adults with dementia (McCarron et al.,

2020). Interview participants also expressed a need for training on working with LGBTQ patients<sup>2</sup> and more health professionals who speak multiple languages and are familiar with diverse cultures.

A 2019 paper conducted on behalf of NRCNA that examines the training needs of OAA Title VI nutrition and aging program professionals suggests creating and implementing a standardized national tribal nutrition training program to better serve tribal elders (Lloyd and Curley, 2019). This need is based on the complex interplay of health disparities that impacts nutrition for tribal elders, including historic trauma, limited access to quality nutrition in remote and rural tribal communities, and a growing emphasis on traditional foods and food sovereignty.

In addition to the literature, the inventory of training materials revealed gaps on meeting the nutrition needs of diverse older adults through traditional foods. While there are resources on traditional foods, including reports and recipes on the NRCNA site and more general resources, such as those from the North American Traditional Indigenous Food Systems (2020), there is a gap in traditional foods training for senior nutrition providers. This gap is specific to Native traditional foods and foods of other ethnic and racial minorities, such as Latinx and Asian. A search of national organizations' websites, including the National Asian Pacific Center on Aging, Hispanic Aging Network, and Diverse Elders Coalition, did not yield training opportunities or materials on nutrition.

## Tailoring Training for Specific Regional and Local Needs

The scan of available trainings and the training inventory revealed that information on trainings at the regional and local levels is disparate and difficult to find. The websites of regional and local organizations are often not up to date in comparison to larger, national organizations. These issues likely stem from limited funding and staffing. However, because the scan and inventory relied on web searches, information exchanged via word of mouth or through social media was not included.

## Training on Needs Assessments

Based on the literature and the inventory of programs, needs assessments are inconsistent for senior nutrition programs. The 2015 evaluation of the OOA Title III-C Nutrition Services Program (NSP) suggested that senior nutrition programs are conducting needs assessments, but not consistently (Mabli et al. 2015). Based on the evaluation results, 20% of state units on aging (SUAs) reported completion of a statewide community needs assessment in the previous 5 years of the study, while 60% conducted at least one local community needs assessment during that time. For AAAs and local service providers (LSPs), the study found that approximately 76 to 86% reassess service needs for congregate and home-delivered meal program participants at least once a year. However, nearly 20% did not have a policy that defines how frequently they should reassess the program participants' needs (Mabli et al., 2015).

A search of the term "needs assessment" on NRCNA's website yielded resources including toolkits, webinar slides, and articles from several years ago. A search of other aging and nutrition organizations

---

<sup>2</sup> SAGECare, a national organization focused on LGBTQ aging issues, provides comprehensive training for service providers on culturally appropriate approaches to working with older, LGBTQ adults.

did not yield information on current trainings and resources. It does not appear that there is current training on the topic specifically for senior nutrition program providers.

## Available and Preferred Training Format and Modalities

The inventory of training opportunities indicates that in-person conferences are an important component of training for senior nutrition providers. The search for current training opportunities yielded 39 in-person events, which are largely annual conferences. Due to COVID-19, these in-person conferences are being canceled or moved to virtual formats.

Findings in the literature and feedback from NRCNA event attendees indicate that they value the networking and connections facilitated by in-person events. For example, a scoping review of preferred modalities for delivering continuing education to the public health workforce reported networking and the opportunity to discuss training materials as a commonly cited enabler for engaging with training content (Archer, Berry, Bajwa, Kalda, and Di Ruggier, 2020). Based on evaluation data from NRNCA's March 2019 in-person convening, attendees also valued the networking aspects of the event; 11 out of 20 post-event survey respondents noted networking or meeting other professions in the nutrition and aging services field as a value of the event. As the safety of in-person events evolves with COVID-19, so will the need for innovative approaches to engender networking over a virtual platform.

## Training Inventory

The training inventory serves as a snapshot of the current landscape of training opportunities. Due to the COVID-19 pandemic, website information on trainings is being updated rapidly as organizations cancel in-person events and develop educational content and webinars related to COVID-19. Therefore, this information will need regular updating to remain current.

The inventory yielded limited results on training opportunities offered at the regional and local levels. As described, in the "Gaps in Training" above, websites for regional and local programs (including AAAs and LSPs) do not appear to be updated as frequently as those of national and state organizations. While the inventory search at the regional and local level includes limitations, the literature does provide some clarity on the scope of trainings in relation to the OAA Title III-C NSP. A 2015 evaluation of this program, which included a survey of SUAs, AAAs, and LSPs, revealed that SUAs provide significant trainings to AAAs and LSPs. The evaluation reported the following data related to training:

- 60% of SUAs held trainings (in the previous 2 years of the survey) on the NSP and related topics;
- About 60% of SUAs provided training on nutrition quality, food safety, and food service to AAAs or LSPs; and
- 96% of all AAAs and LSPs require their service personnel to have food safety and sanitation training.

Overall, the inventory includes the following information:

- 76 training or resource opportunities for senior aging and nutrition providers,
- 24 opportunities offered by national organizations,

## Technical Assistance and Training Needs Assessment Evaluation

### Environmental Scan of the Nutrition and Aging Training Landscape

---

- 41 opportunities offered by state organizations,
- 9 opportunities offered by regional organizations,
- 2 opportunities offered by local organizations,
- 37 online options, and
- 39 in-person options.
